

# HYDROSILA

Wrocław, 2021-01-25

The history of HYDROSILA Group dates back to 1930 when the first assembly workshops were established in Kirovograd. Since then, the company has expanded its business into the European market, effectively using innovations and improvements, including CNC machines. Today it is the market-leading manufacturer of hydraulic machines and hydraulic components for agricultural, construction, and road machinery in the CIS countries. Currently, there are 5 factories located in Ukraine as well as numerous branches all over the world including Shanghai, Moscow, and Astana employing almost 4000 people.

In connection with its dynamic development, in 2017 HYDROSILA Group decided to expand its activities by opening a branch in Poland. The first contact with JWW has been established based on the client's recommendation. He has always been able to count on the help of specialists for years now. The flawless communication and openness to the client's current issues are qualities that definitely come to use when concluding the first business transactions. Especially when it comes to confronting the local regulations with the specific rules of the company. An experienced business partner's support is crucial.

Apart from that, the fact of belonging to numerous - including global - organizations directly translates into the trust HYDROSILA has given to the JWW accounting office. Communication with specialists from all over the world reflects on professional accounting and payroll services.
